

PLATE III.

HOLOPUS RANGI, d'Orbigny.

	Diam.	Page
Fig. 1. View of the cup from above after removal of two of the composite axillaries,	x 3	203
Fig. 2. Interior of the cup of the specimen represented in Pl. II., showing the oral plates. Two axillaries are supposed to be removed,	x 5	208
Fig. 3. Slightly oblique view of the dorsal surfaces of an axillary and the attached first brachial,	x 3	206
Fig. 4. Dorsal aspect of an axillary,	x 3	206
Fig. 5. Oblique view of its proximal face,	x 3	206
Fig. 6. Oblique view of the ventral sides of two united brachials,	x 3	206
Fig. 7. Proximal face of the second brachial,	x 3	206
Figs. 8-13. Terminal faces of some of the large lower brachials,	x 3	207
Figs. 14, 15. Terminal faces of some of the small outer brachials,	x 3	207
Fig. 16. Portions of the pinnules,	x 4	208
