

sponded with the transverse diameter of the brim. The inferior sagittal diameter was below the conjugate. The subpubic angle was 72°. The ischium was something more than four-fifths the length of the ilium; the iliac index was only 121. The innominate index was 82. The pubo-innominate index was 42, and the ischio-innominate index was 44. The sacrum was a little longer than broad, and the sacral index was 98.

ESQUIMAUX AND LAPLANDERS.—TABLE VII. Plate III.

The Esquimaux pelves belonged to two skeletons, a male and a female, which the University Museum acquired from the collection formed by Dr. Alexander Monro *tertius*.
