

Specimen.	Left hepatic duct.	Upper pancreatic duct.	Middle pancreatic duct.	Lower pancreatic duct.	Right hepatic duct.
<i>Eudyptes chrysolophus.</i>					
No. 1	13	4	absent.	5	9
No. 2	3	3½	absent.	3½	8
<i>Spheniscus demersus.</i>					
No. 1	14	18	absent.	absent.	21
No. 2	9	9¼	12	24	15
<i>Spheniscus magellanicus.</i>					
No. 1	13	absent	absent.	34½	26
No. 2	13	16	absent.	32	25
<i>Spheniscus mendiculus.</i>					
No. 1	5¼	6½	absent.	14	7½
<i>Spheniscus minor.</i>					
No. 1	2½	2¼	absent.	3¼	4¾
<i>Pygosceles tæniatus.</i>					
No. 1	10	19	absent.	absent.	13
No. 2	10½	11	absent.	absent.	12
<i>Aptenodytes longirostris.</i> ¹					
No. 1	25	30	absent.	absent.	37

¹ In *Aptenodytes patagonica*, according to Reid (Proc. Zool. Soc., 1835, p. 147) "the biliary and pancreatic ducts enter the intestine about 3½ inches from its commencement."
