

of these indices would appear to prevail. From MM. de Quatrefages and Hamy's twenty-fourth table, which includes Dr. Meyer's Rubi and Kordo crania, along with specimens from Dorey, Salwetti, Wandessa, and Jobie, the mean vertical index, except in the Jobie skull, exceeded the cephalic, and a similar relation is shown in the male Arfaks, though not in the female, measured in their twenty-fifth table. Eight dolichocephalic skulls in Dr. Comrie's collection in the Museum of the Royal College of Surgeons had the vertical index greater than the cephalic, in one it was less, and in two mesaticephali these indices were equal. In three of the five Erroob crania measured by Prof. Flower the vertical index exceeded the cephalic. In the pure Papuan male crania from Warrior
