

specimens the length and breadth were equal; in the sixth the breadth appreciably exceeded the length. The mean sacral index was 98. In the only female the sacral index was 101.

PACIFIC ISLANDERS.—TABLE II. Plate I.

These specimens consisted of three entire pelves and of two others, each with only the right innominate bone, collected by the Challenger at Oahu in the Sandwich Islands. The crania of A., B., and L. are amongst the dolichocephali in Table XI. of the First Part of this Report; I. is amongst the brachycephali in Table X., and M. amongst the mesaticephali in Table XII. I have also examined the sacrum of a Tonga Islander collected by the Challenger, and the pelves of two New Zealanders from skeletons in the Anatomical Museum of the University of Edinburgh.

The pelves from Oahu were all from adult women, and in them the delicacy and
