

was 120.5. The conjugate in the males ranged from 85 to 109 mm., and the mean was 95; in the females from 102 to 109 mm., and the mean was 105.5. The mean pelvic or brim index was 87 in the males, 88 in the females. In both the males and females the intertuberal diameter was considerably less than the transverse diameter of the brim of the pelvis. The mean inferior sagittal diameter in the males was 107, in the females 133; in each sex it was considerably above the mean conjugate of that sex.

The pubic symphysis varied in depth in the males from 36 to 42 mm., and in the females it was 33 and 34 mm. respectively; the depth of the pelvic cavity was less in the females (mean 89 mm.) than in the shallowest (92 mm.) of the males. The mean pubo-innominate index in the males was 41, and in the females it was also 41. The maximum length of the ilium was 125 mm., the minimum 96; the mean iliac index was 130 in the males and 146 in the females. The maximum length of the ischium (a male) was 88 mm., the minimum (a female) 76. The ischium was usually about two-thirds or three-fourths the length of the ilium, but in one male it was as much as seven-eighths

TABLE III.—NEGRO.
